MARKET SUMMARY

In the capital markets generally, the fourth quarter continued its streak of bad news from the third quarter. Beyond the continuing Eurozone debt crisis and the subsquent negative credit watch pronouncements on European sovereigns (ultimately culminating in downgrades in early 2012), the fourth quarter contained the failure of MF Global; the Chapter 9 filings of both Jefferson County (AL) and Harrisburg (PA); and the failure of the U.S. Supercommittee, created by the Budget Control Act, to reach a deficit-reduction agreement by Thanksgiving. Despite the continuing litany of dismal news, the municipal market ended on a positive note, with the sector returning exceptional returns for the year and the primary market coming to life after a tepid three quarters.

Municipal Issuance Overview - Primary Market

According to Thomson Reuters, long-term municipal issuance volume, including taxable and tax-exempt issuance, totaled \$98.6 billion in the fourth quarter of 2011, a 34.7 percent increase from the prior quarter (\$73.2 billion), but a decline of 25.5 percent from 4Q'10 (\$132.3 billion). Issuance picked up in the last three months of the year in both new money and refunding deals, as issuers sought to take advantage of exceptionally low rates. Refunding deals as a percentage of total issuance dipped slightly, representing 30.7 percent of all issuance in 4Q'11, compared to 35.4 percent and 19.3 percent, respectively, from 3Q'11 and 4Q'10.

For the full year 2011, issuance totaled \$287.2 billion, down by a third from the record-breaking \$430.5 billion issued in 2010 and in line with the 2011 forecast of \$288 billion from the 2012 SIFMA Municipal Issuance Survey ("SIFMA Municipal Survey"). The primary market for 2011 remained at levels last seen in 2001 (\$283.5 billion) and was generally in line with the 20-year average (\$287.4 billion). According to the respondents to the SIFMA Municipal Survey, issuance is expected to rise by 20.5 percent in 2012 to \$347 billion, led by general purpose deals. Risks to projections included the elimination and/or reduction in tax-exempt benefits, the implementation of the Dodd-Frank Act, and more aggressive direct bank lending/direct placements (respondents expect \$23 billion in direct placements in 2012).

According to the Investment Company Institute (ICI), fourth-quarter inflow in long-term municipal mutual funds continued to remain positive, with about \$9.5 billion of inflow. For the full year, however, net inflow was negative, with about \$12.0 billion in outflows for 2011.

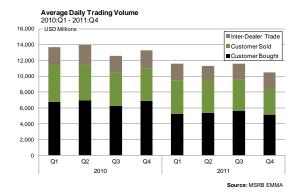

Tax-Exempt Issuance

Tax-exempt issuance totaled \$87.2 billion in 4Q'11, an increase of 18.5 percent and 37.1 percent, respectively, quarter-over-quarter (\$63.6 billion) and year-over-year (\$73.6 billion). For the full year, tax-exempt issuance was \$247.7 billion, a 9.5 percent decline from 2010. Respondents to the SIFMA Municipal Survey project \$303.0 billion in tax-exempt issuance for 2012.

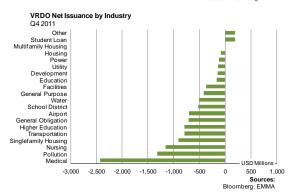

Ratios of tax-exempt AAA GOs and similar-maturity Treasuries gradually declined over the fourth quarter, spiking briefly at the end of October before resuming its gradual decline toward 100 percent. Short-term ratios continued to remain elevated from flight-to-safety demand for Treasuries on the short end. Respondents to the SIFMA Municipal Survey expect the ratio of the 10-

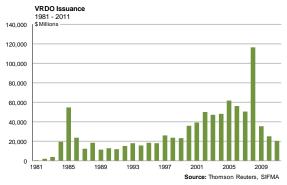

year AAA GO municipals to 10-year Treasuries to decline to 100 percent by the end of 2012.

¹ SIFMA US Municipal Issuance Survey, December 21, 2011.

Taxable Issuance

Taxable issuance was \$9.1 billion in 4Q'11, up by 29.9 percent from 3Q'11 (\$7.0 billion) but down by 26.2 percent year-over-year (\$12.3 billion when excluding Build America Bonds ("BABs")). Taxable issuance continues to remain above historical norms as remaining Congressional programs (e.g., New CREBs, CREBs, QECBs, QSCBs, and QZABS²) continued to run their course. For the full year, taxable issuance was \$31.5 billion, a 6.9 percent decline from 2010, excluding BABs. Respondents to the SIFMA Municipal Survey expect the taxable issuance to rise in 2012 to \$35 billion.

BABs continued to enjoy another strong quarter as yields continued to fall. The sector returned another 1.04 percent in the fourth quarter and returned 22.6 percent on a total return basis for the full year. More generally, municipal debt enjoyed exceptionally good returns relative to volatility, returning 2.1 percent for the fourth quarter and 11.2 percent on a total return basis for the full year, compared to 1.51 percent and 7.12 percent, respectively, for 4Q'11 and full year for A- to AAA-rated corporates.

Trading Activity

Trading activity, however, continued to decline quarter-over-quarter in 4Q'11 to \$10.5 billion daily, a 9.9 percent decline from 3Q'11 (\$11.6 billion traded daily) and a 21.1 percent decline year-over-year (\$13.3 billion traded daily in 4Q'10). The average number of trades, however, remained relatively unchanged from the third quarter (0.1 percent decline), but declined by 10.7 percent year-over-year.

VRDO Issuance and Update

Issuance of variable-rate demand obligations (VRDOs), long-term municipal bonds with a floating interest rate that resets periodically and a put feature, rose in the fourth quarter. According to Thomson Reuters, \$11.4 billion were issued in 4Q'11, more than double the amount from 3Q'11 (\$3.5 billion), but a 6.5 percent decline year-over-year (\$11.4 billion). While the fourth quarter spike in issuance quarter-over-quarter is typically seasonal (in the last 10 years, fourth-quarter issuance composed on average 30.7 percent of annual issuance, compared to third quarter's 21.5 percent), issuance in the fourth quarter composed nearly 60 percent of issuance in 2011. Despite the jump, only \$20.1 billion was issued in aggregate for 2011, a 19.5 percent decline from 2010 and the lowest issuance in 15 years. For 2012, survey participants in the SIFMA Municipal Survey project a continued decline in VRDO issuance to \$10 billion.

The continuing credit deterioration of European sovereigns and financials continued to play a role in the VRDO market. European financials and their U.S. bank subsidiaries continued to largely lead the withdrawal from providing liquidity in the VRDO market in the fourth quarter, with withdrawals coming predominantly from Dexia, BNP Paribas and Santander. While both Canadian and Japanese banks continued to pick up some renewals, both U.S. large and regional banks were more aggressive in picking up renewals in the fourth quarter. In addition, a strong trend emerged in 2011 of issuers placing outstanding VRDNs with bank directly in lieu of obtaining or extending bank-

provided liquidity facilities (direct placements/direct lending).

On net, VRDO outstandings continue to decline, ending the year below \$300 billion, with \$293.6 billion outstanding as of the end of December 2011, a decline of 3.6 percent from 3Q'11 and an

² CREB – Clean Renewable Energy Bonds; QECB – Qualified Energy Conservation Bonds; QSCB – Qualified School Construction Bonds; QZABs – Qualified Zone Academy Bonds.

estimated 13 percent decline year-over-year.³ Declines in outstandings were led by nursing (11.8 percent), airport (11.7 percent), and school districts (10.7 percent). Despite the decline in VRDO outstandings, tax-exempt money market funds, on the other hand, reported a net increase in assets in 4Q'11, adding \$3.2 billion in assets (1.1 percent).

As of end-December, \$88.0 billion in liquidity facilities were scheduled to expire in 2012, and an additional \$61.5 billion in 2013, for a total of \$149.5 billion⁴. While there remains a significant bump in expirations at the end of 2012 due to the original expiration date of the U.S. Treasury's Temporary Credit and Liquidity Program ("TCLP"), the program was extended to December 31, 2015, relieving some near-term pressure on housing agencies to seek alternative liquidity providers or tender bonds.

Liquidity facility renewals on more than 1,400 CUSIPs averaged 719.4 days on extension (compared to 599 days in 3Q'11). The median extension remained unchanged in 4Q'11 from 3Q'11 (366 days). Currently, of the entire universe of VRDOs, the average liquidity facility length is 4.34 years, with the median length 558 days, or approximately a year and a half. The SIFMA Municipal Swap index, a seven-day high-grade market index comprised of tax-exempt VRDOs, ended December at 0.10 percent, averaging 0.13 percent in 4Q'11, 1 basis point lower than the 3Q'11 average.

State and Local Government Update: Sequestration and Chapter 9

While the housing markets continued to remain stagnant in the fourth quarter, the U.S. Treasury implemented extensions to two programs intended to aid housing agencies: the TCLP, a program intended to provide liquidity support to housing-related variable-rate bonds, was extended to 2015; while the New Issue Bond Program ("NIBP") was extended to 2012.

As the deadline for the debt ceiling to be breached neared in August 2011, a compromise was struck last minute and the Budget Control Act of 2011 enacted on August 2. The act contained agreements to reduce the deficit over the next 10 years by \$2.1 trillion to \$2.4 trillion; in addition, it also created a Supercommittee to recommend \$1.5 trillion in cuts by Thanksgiving to be passed and signed by Christmas. However, the Supercommittee failed to reach agreement by Thanksgiving. The failure means sequestration, with automatic budget cuts totaling \$1.2 trillion split primarily between defense and discretionary programs to take effect beginning the new fiscal year on October 1, 2012. According to SIFMA's 2011 End-Year Economic Outlook survey, the majority of respondents believed that Congress will attempt to change or avoid sequestration and that the scheduled cuts are *not* expected to go into effect as currently written.⁵

Toward the end of September but formalized in December, the city of Central Falls, Rhode Island, filed for Chapter 9 bankruptcy from its inability to repay its incinerator debt of \$310 million. In addition, after the Jefferson County Commission voted four to one authorizing a filing of Chapter 9 on November 9, Jefferson County, Alabama, filed the largest U.S. municipal bankruptcy in history the same day. The Jefferson County filing impacts \$200.5 million in GO warrants, \$814.08 million in limited-obligation school warrants and \$3.13 billion in sewer revenue warrants. Outside of municipalities, the municipal bond market was also generally impacted by the Chapter 11 filing by AMR Corp, the parent corporation of American Airlines, who had backed several airport conduit bonds.

According to Census data released mid-December, state revenue in fiscal year 2010 showed a recovery of 79 percent in 2010 from 2009 (\$2.0 trillion from 1.1 trillion), but was mainly through the recovery of trust system earnings (i.e., employee retirement and social insurance). Revenues from

4

³ Outstanding numbers no longer reflect aggregate par amounts at issuance and have been revised in 4Q'11 to subsequently reflect all amortization from sinking funds/partial calls, etc.

⁴ The number somewhat overstates the actual outstanding amount, as credit facilities are allotted the full amount of the bond outstanding in this analysis; a bond holding multiple credit facilities (with the possibility that each provider only partially funds the liquidity arrangement) would therefore be counted multiple times. This inflation is prevalent to a greater extent in 2012 due to the original scheduled expiration of the TCLP in December, which is a joint liquidity facility arrangement between Fannie Mae and Freddie Mac for certain single- and multi-family housing bonds.
⁵ SIFMA End-Year 2011 Economic Outlook, January 10, 2012.

⁶ Jefferson County, Alabama, Material Event Notice, November 9, 2011.

taxes, however, declined 1.9 percent, whereas revenue from federal grants increased 16.7 percent, largely through monies distributed from the American Recovery and Reinvestment Act ("ARRA").7 While 2011 data area not available, tax collections in the seven quarters following the end of 2009 have shown positive growth; as of preliminary data for the third quarter of 2011, the Nelson A. Rockefeller Institute noted that "overall state tax revenues have recovered to pre-recession figures. . . [but] [m]ost states have not yet returned to peak levels."8 On the local government level, however, reduced funding and continuing stagnant housing conditions will serve to depress local government tax collections in the near- and medium-term.

Dodd-Frank Update

The Dodd-Frank Wall Street Reform and Consumer Protection Act, signed into law in July 2011, mandated studies of the municipal market, including mechanisms for trading, price discovery and price transparency. On January 17, the U.S. Government Accountability Office ("GAO") released its report on the overview of municipal market structure, pricing, and regulation in response.9

^{11 &}quot;Market risk activity" (as defined by DTCC): The gross notional and contract counts include transaction types of new trades between two parties, a termination of an existing transaction, or the new leg of an assignment representing the trade between the step-in party and the remaining party. Excludes transactions which do not result in a change in the market risk position of the market participants, and are not market activity. For example, central counterparty clearing, and portfolio compression both terminate existing transactions and re-book new transactions or amend existing transactions. These transactions still maintain the same risk profile and consequently are not included as "market risk transfer activity."

TOTAL (1/5/2011)

¹² Investment-grade outstanding requires a minimum of 1 investment grade rating from either Moody's, Standard and Poor's, or Fitch Ratings and will therefore include split-rated issues (*i.e.*, a bond with both an investment-grade and high yield rating); non-investment grade debt outstanding includes debt both rated junk as well as non-rated securities. Outstanding includes both short- and long-term municipal debt, VRDOs and ARS. "Due in 13 months" will include debt with an original maturity of 13 months or longer. Outstanding does not include refunded (inclusive of prerefunded) debt and derivatives; prior to 6/30, did not include zero coupons. See addendum tables for prerefunded and derivatives debt. The chart replaces "Outstanding by Insurance" from prior municipal reports. For comparability against Federal Reserve's Flow of Funds aggregate prerefunded but not derivatives.

BAB Only VRDO Prerefunded Derivatives

Means and medians of currently outstanding CUSIPs resetting in December 2011. For CUSIPs resetting multiple times in the month, resets are averaged prior to being averaged against other CUSIPs so that each CUSIP has equal weight in the set. CUSIPs used are limited to 7-day tax-exempt VRDOs for comparability.

CUSIPs used are limited to 7-day tax-exempt VRDOs for comparability. Certain bank liquidity facilities have been consolidated to the holding company level.

A DESCRIPTION OF THE TERMINOLOGY IN THE MUNICIPAL BOND CREDIT REPORT

<u>Long-Term Municipal Issue</u>: municipal securities with a maturity of 13 months or longer at the time the municipal security is issued.¹⁸

General Obligation (G.O.) Bonds: bonds issued by state or local units of government. The bonds are secured by the full faith, credit and taxing power of the municipal bond issuer. Such bonds constitute debts by the issuer and often require approval by election prior to issuance. In the event of default, bondholders of G.O. bonds have the right to compel a tax levy or legislative appropriation to cover debt service.

Revenue Bonds: bonds payable from a specific source of revenue and to which the full faith and credit of an issuer and its taxing power are not pledged. Revenue bonds are payable from identified sources of revenue and do not permit the bondholders to compel taxation or legislative appropriation of funds not pledged for payment of debt service. Pledged revenues may be derived from sources such as the operation of the financed project, grants or a dedicated specialized tax. Generally, no voter approval is required prior to issuance of such obligations.

Ratings: are evaluations of the credit quality of bonds and other debt financial instruments made by rating agencies. Ratings are intended to measure the probability of the timely repayment of principal and interest on municipal securities. Ratings are typically assigned upon initial bond issuance. Ratings are periodically reviewed and may be amended to reflect changes in the issue or issuer's credit position. The ratings may be affected by the credit worthiness of the issuer itself or from a credit enhancement feature of the security such as guarantor, letter of credit provider, and bond insurer. Some rating agencies provide both long-term and short-term ratings on variable rate demand obligations. The ratings described herein are "long-term" ratings – that is, ratings applied to municipal bond issues with original maturity of 13 months or longer.

<u>State Rating</u>: indicates the G.O. credit rating a rating agency may apply to a state. The rating on a specific municipal bond issue or issuer located with the state may differ from the state rating.

Rating Agency: is a company that provides ratings that indicate the relative credit quality or liquidity characteristics of municipal securities as well as other debt securities. Moody's Investors Service ("Moody's") and Standard and Poor's are the largest agencies in terms of municipal securities rated, followed by Fitch Ratings.

Moody's Ratings19

Moody's describes its municipal credit ratings as "opinions of the investment quality of issuers and issues in the U.S. municipal and tax-exempt markets. These ratings incorporate a rating agency's assessment of the probability of default and loss severity of issuers and issues."

Moody's ratings are based upon the analysis of four primary factors relating to municipal finance: economy, debt, finances and administrative/management strategies. The rating classifications are defined as:

<u>Aaa</u>: obligations rated Aaa are judged to be of the highest quality, with minimal credit risk.

<u>Aa:</u> obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A: obligations rated A are considered upper-medium grade and are subject to low credit risk.

<u>Baa:</u> obligations rated Baa are subject to moderate credit risk. They are considered medium-grade and as such may possess certain speculative characteristics.

Ba: obligations rated Ba are judged to have speculative elements and are subject to substantial credit

1

¹⁸Authors' own definition.

¹⁹Moodys.com, "Ratings Definitions."

risk.

B: obligations rated B are considered speculative and are subject to high credit risk.

<u>Caa</u>: obligations rated Caa are judged to be of poor standing and are subject to very high credit risk.

<u>Ca</u>: obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

<u>C</u>: obligations rated C are the lowest rated class of bonds and are typically in default, with little prospect for recovery of principal or interest.²⁰

Standard and Poor's Ratings²¹

Standard and Poor's describes a municipal issue credit rating as "a current opinion of the credit worthiness with respect to a specific financial obligation(s) or a specific program. It takes into consideration the credit worthiness of credit enhancement on the obligation."

Long-term issue credit ratings are based on:

- Likelihood of payment—capacity and willingness to meet the financial commitment in accordance with the terms of the obligation;
- Nature of and provisions of the obligation; and
- Protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

AAA: extremely strong capacity to meet its financial commitments – the highest rating category.

AA: very strong capacity to meet financial commitments.

<u>A:</u> strong capacity to meet its financial commitments but is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligors in the higher rated categories.

<u>BBB</u>: adequate capacity to meet its financial commitments though adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to meet financial commitments

Rating "BB", "B", "CCC, and "CC" are regarded as having significant speculative characteristics. "BB' indicates the least degree of speculation and 'CC' the highest.

<u>BB</u>: less vulnerable in the near term than other lower-rated obligors. However, it faces major ongoing uncertainties and exposure to adverse business, financial, or economic conditions which could lead to inadequate capacity to meet its financial commitments.

<u>B</u>: an obligation rated B' is more vulnerable to nonpayment than obligations rated BB', but the capacity to meet its financial commitment. Adverse business, financial, or economic conditions will likely impair the capacity or willingness to meet financial obligations.

<u>CCC</u>: currently vulnerable, and is dependent upon favorable business, financial, and economic conditions to meet financial commitments.

<u>CC</u>: highly vulnerable and is dependent upon favorable business, financial and economic conditions.

Fitch Ratings

Fitch Ratings provides an opinion on the ability of an entity or a securities issue to meet financial commitments such as interest, preferred dividends, or repayment of principal, on a timely basis.

 $^{^{20}}$ The lowest rating is a "D" at both Moody's and Standard and Poor's.

²¹Standardandpoors.com "Long-Term Issue Credit Ratings," May 17, 2002.

Credit ratings are used by investors as indications of the likelihood of repayment in accordance with the terms on which they invested. Thus, the use of credit ratings defines their function: "investment grade" ratings (long-term 'AAA' - 'BBB' categories) indicate a relatively low probability of default, while those in the "speculative" or "non-investment grade" categories (international long-term 'BB' - 'D') may signal a higher probability of default or that a default has already occurred. Entities or issues carrying the same rating are of similar but not necessarily identical credit quality since the rating categories do not fully reflect small differences in the degrees of credit risk.

The ratings are based on information obtained directly from issuers, other obligors, underwriters, their experts, and other sources Fitch believes to be reliable. Fitch does not audit or verify the truth or accuracy of such information. Ratings may be changed or withdrawn as a result of changes in, or the unavailability of, information or for any other reasons.

Credit ratings do not directly address any risk other than credit risk. In particular, these ratings do not deal with the risk of loss due to changes in interest rates and other market considerations.

<u>Note</u>: "Not rated" refers to municipal bonds that were not rated by one of the major rating agencies listed above.

<u>General Use of Proceeds:</u> Refers to the type of project the proceeds or funds received from bond issuance are used. In the Municipal Bond Credit Report, the use of proceed classifications are general government use, education, water, sewer and gas, health care and a miscellaneous category, "other."²²

Bond Buyer Sectors

The following divisions comprise the sectors in this report

Development: Office Building (non-governmental), Industrial Development, Economic Development

Education: Primary and Secondary Education, Higher Education, Student Loans, Other Education

Environmental Facilities: Pollution Control, Solid Waste, Recycling

Electric Power: Public Power Facilities

General Purpose: Veterans, General Purpose/Public Improvement, Agriculture

Healthcare: Nursing Homes, Single Specialty Hospitals, Hospital Equipment Loans, Assisted Living, Continuing Care Retirement, General Acute Care Hospitals, Children's Hospitals, General Medical

Housing: Single Family Housing, Multi Family Housing

Public Facilities: Libraries and Museums, Correctional Facilities, Convention and Civic Centers, Stadiums and Sports Complexes, Theatres, Other Recreation, Parks and Zoos, Police Stations and Equipment, Fire Stations and Equipment, Government Buildings

Transportation: Toll Roads and Street Improvements, Highways, Airports, Seaports/Marines, Other Transportation, Mass Transit, Public Parking, Tunnels, Bridges

Utilities: Combined Utilities, Water and Sewer, Gas, Telecommunications, Sanitation, Flood Control

Geographic Regions²³

The following states comprise the regions in this report

Far West: Alaska, California, Hawaii, Idaho, Montana, Nevada, Oregon, Washington, Wyoming

Midwest: Iowa, Illinois, Indiana, Michigan, Minnesota, Missouri, North Dakota, Nebraska, Ohio, South Dakota, and Wisconsin

.

²²Authors' own definition.

²³The geographic region definitions are taken from the definitions provided by Thomson Financial SDC database (the source of the data for the geographic region section of the report) which in turn sources the *Bond Buyer* newspaper.

Northeast: Connecticut, District of Columbia, Delaware, Massachusetts, Maryland, Maine, New Hampshire, New Jersey, New York, Pennsylvania, Puerto Rico, Rhode Island, Vermont

Southeast: Virginia, Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, West Virginia

Southwest: New Mexico, Texas, Utah, Arkansas, Arizona, Colorado, Kansas, Oklahoma

Municipal G.O. to Treasury Ratio: is a common measure of credit risk of municipal bonds relative to risk-free securities, Treasuries. It is a measure comparable to the "spread to Treasury" measure in the taxable markets. Typically the the municipal yield is typically less than 100 percent of the Treasury yield due to the tax-free nature of municipal securities.

<u>Credit Enhancement:</u> is the use of the credit of an entity other than the issuer to provide additional security in a bond. The term is usually used in the context of bond insurance, bank letters of credit state school guarantees and credit programs of federal and state governments and federal agencies but also may apply more broadly to the use of any form of guaranty secondary source of payment or similar additional credit-improving instruments.

Bond Insurance: is a guaranty by a bond insurer of the payment of principal and interest on municipal bonds as they become due should the issuer fail to make required payments. Bond insurance typically is acquired in conjunction with a new issue of municipal securities, although insurance also is available for outstanding bonds traded in the secondary market.

Letter of Credit: a commitment, usually made by a commercial bank, to honor demands for payment of a debt upon compliance with conditions and/or the occurrence of certain events specified under the terms of the commitment. In municipal financings, bank letters of credit are sometimes used as additional sources of security with the bank issuing the letter of credit committing to in the event the issuer is unable to do so.
